DIRECT OTT STREAMING RECEPTION

Recording and real-time monitoring of live events and signals from streaming platforms

Receive live TV signals directly from OTT platforms. No hardware. No complications.

Disney+, Flow, HBO Max and more... straight into your logging and clipping system.

Connect your streaming accounts and start recording, monitoring and clipping live content without using decoders, extra cards or physical infrastructure.
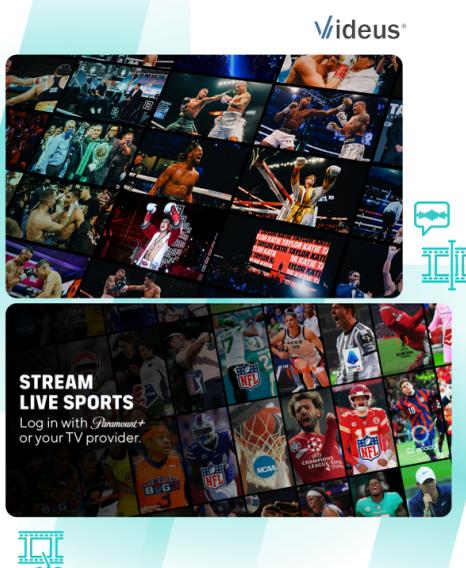

Funcionalidades

- **Direct connection from OTT platforms**

  Access live feeds from services like Disney+, Flow, HBO Max, and other compatible providers, directly via the platform.

- **Real-time recording and clipping**

  Instantly generate clips, highlights and excerpts with the same quality provided by the OTT provider.

- **No hardware required**

  You no longer need set-top boxes (STBs), capture cards, physical installation or cabling — fewer failure points, lower costs, more flexibility.

- **Instant deployment**

  Connect the streaming service account. → **Select the feeds .** → **Start recording.**

- **Access to signals from other regions via VPN**

  Integrated secure VPN configuration lets you receive feeds that are only available in other countries/regions — useful for international monitoring, compliance, or coverage of geo-restricted events.

How It Works

- Connect your streaming account (Disney+, Flow, HBO Max, etc.).
- The system automatically detects available live signals or events.
- Choose which channels you want to receive or schedule which live events you want to record.
- The engine begins logging and recording in real time.
- You can search, review, and clip as with any other input in your platform.

Casos de uso

- **Media monitoring and broadcast verification**

  Access signals that previously required physical decoders.

- **Social-media clipping and content repurposing**

  Generate clips from OTT content and publish them automatically.

- **Highlights production for live events**

  Combine traditional TV sources and OTT feeds without adding set-top boxes.

- **Legal compliance and archiving**

  Store records of emissions coming from streaming services with the same traceability as other inputs.

Why It's Innovative?

The industry traditionally depends on hardware to capture TV signals. We remove that. This new module allows you to:

- Receive native OTT signals.
- Receive signals exclusive to other regions.
- Reduce operational costs.
- Increase scalability of the service.
- Facilitate adoption in remote or distributed teams
