

OPTIONAL MODULE

SCTE-35 & SCTE-104 & ASRUNLOG

AUTOMATIC INDEXING AND MONITORING

The Asrunlog engine enables in the system the possibility of incorporating the broadcast Logs of any Playout. The configuration is simple and allows to have all the material indexed with the broadcast information. Supports multiple simultaneous channels for both Radio / TV, as well as analog and digital platforms. The events of SCTE-35/104 such as splice_insert can be recognized and monitored by the system automatically, for the auditing of advertising segments. Both the Asrunlogs and SCTE-35/104 events allow the system to have the ability to extract clips automatically determined by those events.

ASRUNLOG INTEGRATION MONITORING AND SEARCHES.

Features

- Check the artistic emission and advertising guidelines.
- 100% remote operation from web interface with preview Automatic clips.
